

GOLD'NCUT™

“First time in the field we could see a BIG difference with the GOLD'NCUT™ system compared to the factory system.”
- Rodger N. of North Dakota

CUTTING SYSTEM

GOLD'NCUT™

Increase ground speeds and minimize crop shatter with Crary®'s cutting systems!

Each cutting system includes the Thunderbolt Sickle Bar™ with Crary's Gold Guards™ and Spring Loaded Hold Downs™. Your choice of Bearcut™, KingKut™, Stalk Raptor™ or Gold sections. The sickle sections come in a variety of serrations that can be used on a number of crops.

GOLD GUARDS

Gold Guards have an exclusive design with a full point next to a mini-point, that doubles cutting surfaces for twice the cutting action of every sickle stroke keeping shatter loss to the absolute minimum.

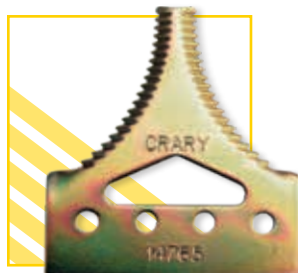

SPRING LOADED HOLD DOWNS

Standard feature on Crary's cutting systems. This innovative hold down adjusts with the turn of a bolt, allowing you to maintain uniform hold down pressure while operating a free-flowing sickle.

STALK RAPTOR

The Crary Stalk Raptor is an innovative new design that offers an extra-coarse serration with additional piercing points to slice through today's heartier pulse crop stalks. The aggressive serration design requires less horsepower, reduces shatter loss and increases ground speeds.

KINGKUT SECTION

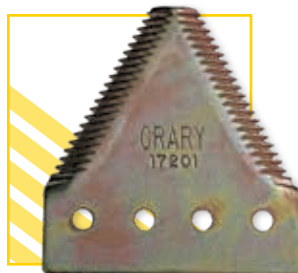

The KingKut section is a coarse, top serrated, section designed to allow plant material to enter the cutting area more quickly. Very effective in trashy cutting conditions such as no-till farming.

GOLD SECTION

Top or bottom serrated: Fine

For fine stem crops such as grass or hay.

BEARCUT SECTION

Top Serrated: Coarse

For more coarse stem crops such as soybeans or small grains.
