“ **GOLD'NCUT™**
It's a very clean cut and the
quietest sickle I have ever ran!
- Tony F. of Fast Ag Montana
”

GOLD'NCUT™

Increase ground speeds and minimize crop shatter with Crary®'s cutting systems!

Each cutting system includes the Thunderbolt Sickle Bar™ with Crary's Gold Guards™, Spring Loaded Hold Downs™, and your choice of Stalk Raptor™, Bearcut™ or KingKut™ sections. The sections come in a variety of serrations that can be used on a number of crops.

Spring Loaded Hold Downs™

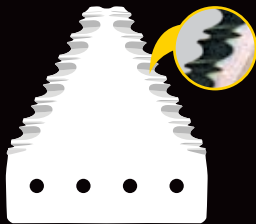

Standard feature on Crary's cutting systems. This innovative hold down adjusts with the turn of a bolt, allowing you to maintain uniform hold down pressure while operating a free-flowing sickle.

Gold Guards™

Gold Guards have an exclusive design with a full point next to a mini-point, that doubles cutting surfaces for twice the cutting action of every sickle stroke keeping shatter loss to the absolute minimum.

Features

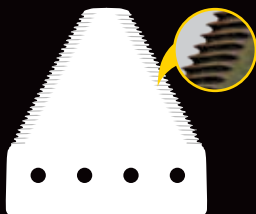

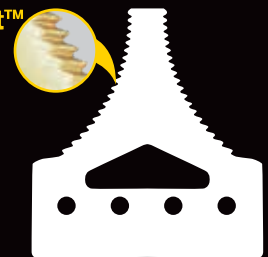

Stalk Raptor™

- ✓ Extra-coarse serration with added piercing points.
- ✓ Aggressive hybrid serration design requires less horsepower, reduces shatter loss and increases ground speeds.

A coarse, top serrated, section designed to allow plant material to enter the cutting area more quickly.

Effective in trashy cutting conditions such as no-till farming.

Kingkut™

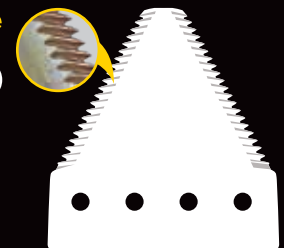

Gold: Fine

- ✓ For fine stem crops such as grass or hay. Top or bottom serrated.

BEARCUT™: Coarse

For more coarse stem crops such as soybeans or small grains.
